

MEN'S HORMONES PLUS TEST REPORT

Patient Name

John Doe

Patient ID

JD700618

Non-smoker

BMI 27**Waist** 34 in**DOB**

6/18/1970 (48 yrs.)

Report Date and Time

1/16/2019 12:00

MedicationsSynthroid, Valtrex, Lysine, Wellbutrin, Liothyronine,
Allertec, Selenium, Vitamin Supplements.**Gender**

M

Received Date and Time

1/9/2019 15:00

Specimen Collection Date and Time

Saliva Morning 1/6/2019 07:42

Saliva Noon 1/6/2019 12:00

Saliva Evening 1/6/2019 16:00

Saliva Night 1/6/2019 21:00

Provider ID: 0000

Doctor T

17387 63rd Ave

Lake Oswego, OR 497035

Ph: xxx-xxx-xxxx

YOUR TEST RESULTS

Estradiol (pg/mL)

Normal Range

Low or High Range

Your Levels

**Testosterone (pg/mL)****DHEA (pg/mL)**

Cortisol Morning (ng/ml)

Cortisol Noon (ng/ml)

Cortisol Evening (ng/ml)

Cortisol Night (ng/ml)

What do your hormone results mean?

ESTRADIOL

Estradiol acts mainly as a growth hormone for the reproductive structures in females. In addition, estradiol works in conjunction with progesterone during the menstrual cycle and pregnancy. Low estrogen levels can cause low libido or diminished sex drive and too much estrogens can cause symptoms of estrogen dominance. In males, estradiol is involved in sperm maturation and also helps to maintain a healthy libido.

Estradiol has a significant role in maintaining healthy bone growth and improving blood flow in coronary arteries in addition to offering neuroprotective effects. Estrogens have been known to contribute to risk of breast cancer as well as some non-cancerous conditions like endometriosis and uterine fibroids.

TESTOSTERONE

Testosterone has important role in maintaining bone strength, muscle mass and energy level. In women, testosterone contributes to sex drive or libido. Menopause causes significant decline in the testosterone levels. In men, testosterone is responsible for growth and development of sexual characteristics, facial and body hair, increased sexual drive and sperm production.

Low testosterone levels can result in conditions like hair loss, reduced muscle mass, hot flashes, depression and increased breast size. High testosterone levels have been linked with aggressive behavior, acne, low sperm count, liver disease and heart muscle damage.

DHEA

DHEA is produced by the adrenal glands and is a precursor to both testosterone and estrogens. DHEA is also a neurohormone as small quantities are produced in the brain. It has a broad spectrum of benefits including improved energy, mood, memory, increased testosterone levels, enhanced libido and immune function. In men, low DHEA levels can cause low libido, reduced muscle mass and strength, depression, fatigue and compromised immune function. In women, DHEA is known to balance other hormones like estrogens, progesterone and testosterone. Low DHEA levels can cause weight gain, depression, fatigue and low libido.

CORTISOL

In addition to being called as “the stress hormone”, cortisol helps in proper glucose metabolism, converting sugars into energy. High cortisol levels in men have been associated with hyperglycemia, weight gain, compromised immune function and high blood pressure. Cortisol imbalance is known to result in conditions like irritability, fatigue, depression, foggy thinking, weight gain and bone loss. Stress reducing activities including meditation and breathing exercise have been recommended to relieve stress levels and avoid premature aging.

This report is only for information purpose and does not provide any diagnosis or treatment. There may be many other risk factors that must be considered for a complete assessment of your health. Please consult your healthcare provider to discuss your results and any questions you may have about your wellness. This test was developed and its performance characteristics determined by AYUMETRIX. It has not been cleared or approved by the FDA. The laboratory is regulated under CLIA as qualified to perform high-complexity testing.
